OMEGA RACE

You control a small triangle that is your ship. The ship can turn, move forward (with thrusters) and fire. Movement is one of the game's challenges; once the ship is moving, it can only be slowed by turning the nose in the opposite direction and using the thrusters. While doing that, the ship is unable to fire toward anything it is in motion toward.

Bouncing also comes into play during movement. When the ship hits the side of the screen, a wall of force appears, and the ship bounces. You don't have control over where the ship bounces, and must take time to regain control, before you run into an enemy ship and die.
